

## **Your companion for innovation and growth**

The ORKILA group has the pleasure to announce its new partnership with the Saint Joseph University.

The USJ and ORKILA have taken a decision to combine their efforts towards the promotion of the common goal of industrial progress and innovation.

Using work carried out by the Faculté des Sciences of the USJ laboratories, ORKILA will now be able to assist its clients in providing technical solutions to problems, ranging from the innovative idea to full scale industrialisation.

Since its creation in 1875, the Saint Joseph University has been in a constant state of development and diversification. The Science faculty of the USJ, while involved in a broad range of science based disciplines, specialises particularly in Chemistry and Physics and is considered to be a centre of excellence in these areas. Equipped with laboratories accredited by COFRAC (Comité Français d'Accréditation), the Science Faculty of the USJ is internationally recognized for its research activities and has a regional influence in the academic and industrial landscape.

Backed by expertise and know-how acquired over many decades of work in the chemical industry, the ORKILA group has evolved a comprehensive distribution network tailored to its customer's needs. Local teams, in daily contact with numerous manufacturers, have a thorough knowledge of the market and are thus able to present both customers and suppliers alike with new growth opportunities.

This collaboration, a springboard for innovation, will enable ORKILA to offer its customers a new perspective to technical issues and will, at the same time, permit the Saint Joseph University to enhance its involvement in the industry.
